

Workshop Social Computer Science and Urban-Regional Development

Centro de [Estudos] Estudos
Euro [Regionais] Regionais
Galicia [Galiza]
Norte de Portugal

The Social Computer science establishes conditions of scientific collaboration between technologists and social scientists and creators of the arts and humanities, whose ultimate goal is the achievement of the economic, social and cultural development, etc., within concrete territories. They put in value and impel the flows of communication and knowledge between urban and rural populations, and that of peripheral and central regions.

The Territorial Marketing is a strategic planning instrument that uses new technologies of information and communication, telematics and methodologies of geographical and business administration sciences with the aim to put forward projects of development aimed to benefit societies and their territories. In the same way, being an object of the information dissemination through new technologies, the Natural Sciences and the patrimony management would also have such capacity since they can offer the digitization of information on their resources. Also, the territory can be conceived as an informational product that in turn can be a visitors' demand, thus making possible new managerial functions and niches of activity.

The basic purpose of organization and celebration of the workshop in Social Computer science and Urban-Regional Development by CEER Foundation is the contribution to the dissemination and sensitization about the value of the knowledge as a productivity factor between the society in general and mainly outlining the Galicia-North of Portugal Euroregion.

Programme

09:30

Opening

10:00 - 11:00 h.

Talk

Information Society and Research in the Irish University System

· Prof. Patrick O'Flanagan, Geography Department-University College Cork, Irlanda.

11:00 - 12:00 h.

Research topic exposition and current projects

- Research Group "Society, Technology and Territory" University of Santiago de Compostela
- Research Group, Geography and Planning, University of Minho
- Research Group in Telematics, University of A Coruña
- Research Group Globalization, State and Politics, University Tras-os-Montes and Alto Douro
- Research Group, New Media, USC
- Information Management and Networks Knowledge Group, University of Porto
- Research Group, Intelligent Systems, USC.
- Research Group, Territory, Land and Biodiversity, USC.
- Research Group in Computer Languages and Systems

12:00 - 12:30 h.

Coffee Break

12:30 - 13:30 h.

Research topic exposition and current projects

Research Group, Intelligent Systems, USC.

Research Group "Society, Technology and Territory" University of Santiago de Compostela

Information Management and Networks Knowledge Group, University of Porto

Research Group, Territory, Land and Biodiversity, USC.

Research Group, Information Systems, University of Minho.

Research Group in Computer Languages and Systems

13:30 -14:00 h.

Exhibition

· D. Fernando Sedano. Técnico Xestión IDT, do Centro de Investigación and Technological Transfer Centre in University of Santiago de Compostela

Organization

CEER Foundation is organizing the first workshop "Social Computer Science and Urban-Regional Development" financed by Xunta de Galicia trough DG Industrial Promotion and Information Society

The main objective of this scientific event is basically the contribution to the promotion and divulgation of the Information Society outlining the Galicia-North of Portugal Euroregion.

Management Technician: Antía Pose García.

Addressed to

Academic and Scientific Community of Galica – North of Portugal Euroregion and general public.
